FACSIMILE COVER SHEET

In the UNITED STATES PATENT AND TRADEMARK OFFICE

First Named Inventor: Hans-Martin Dietrich

Application No. 10/501,750

Attorney Docket No. 2002P00211WOUS

Filed: July 15, 2004

Title: IMPROVED DATA PROTECTION FOR POSITION DEPENDENT SERVICES

Examiner: Nghi H. Ly

Art Unit: 2617

⇒ FACSIMILE ATTN TO: N

NGHI H. LY

FAX NO.: 571-273-8300

APPELLANT'S BRIEF

Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

Certificate of Transmission under 37 CFR 1.8

I hereby certify that this correspondence is being facsimile transmitted to the Patent and Trademark Office on November 22, 2006.

Ann Hickey ()
Typed or printed name of person signing Certificate

Note: Each paper must have its own certificate of transmission, or this certificate must identify each submitted paper.

This facsimile cover sheet which includes a Certificate of Transmission under 37 CFR 1.8 (1 pg)

- PTO/SB/21 Transmittal Form (1 pg.)
- PTO/SB/17 Fee Transmittal (2 pgs. original and 1 copy)
- Appellant's Brief (13 pgs.)

Number of pages being transmitted (including this cover sheet): 17 pgs

APPELLANT'S BRIEF UNDER 37 CFR 41.10

This brief is in furtherance of the Notice of Appeal filed in this application on September 25, 2006.

1. REAL PARTY IN INTEREST - 37 CFR 41.37(c) (1) (I)

The real party in interest in the present Appeal is the assignee of record of the present application, Siemens Aktiengesellschaft.

11/27/2006 EFLORES 00000032 192179 10501750 01 FC:1402 500.00 DA

2. RELATED APPEALS AND INTERFERENCES - 37 CFR 41.37(c) (1) (ii)

There is no other appeal, interference or judicial proceeding that is related to or that will directly affect, or that will be directly affected by, or that will have a bearing on the Board's decision in this Appeal.

3. STATUS OF CLAIMS - 37 CFR 41.37(c) (1) (iii)

Claims cancelled: 1-17 and 33.

Claims withdrawn but not cancelled: none.

Claims pending: 18-32 and 34.

Claims allowed: none.

Claims rejected: 18-32 and 34.

Claim rejections appealed: 18-32 and 34.

STATUS OF AMENDMENTS - 37 CFR 41.37(c) (1) (iv) There is no unentered amendment subsequent to final rejection.

5. SUMMARY OF CLAIMED SUBJECT MATTER- 37 CFR 41.37(c) (1) (v)

Claim 18

Independent claim 18 is directed to a method for requesting the agreement of a user of a mobile terminal 13 (FIG. 3) in a mobile radio network to the transfer of their position data to a party, e.g., Locator Services Application (LCS) 11, requesting this position data. For example, see paragraphs 36-37 of publication document of the present application. The method allows providing a central privacy entity 26 comprising a database server for storing privacy data 18 regarding the mobile terminal. In particular, the central privacy entity constitutes a separate entity from a Home Location Register (HLR) 16 for the mobile terminal. The privacy data 18 stored in the database server at the central privacy entity is defined to assign to the mobile terminal at least one verification rule as to whether an agreement must be obtained on the mobile terminal side to forward

the mobile terminal position to the requester. See paragraphs 38-39 of publication document of the present application. The switching center 14 of the mobile radio network (in the event of the arrival of a request from a requester for the position of the mobile terminal) causes the database server at the central privacy entity 26 to make a check on the basis of the privacy data stored there.

The results of the check performed at the central privacy location 26 are sent to the switching center 14. If the result indicates that an agreement must be obtained, the switching center 14 sends a request for an agreement to the mobile terminal. If the agreement is received by the switching center, then the position of the mobile terminal is sent by the switching center to the requester. See paragraph 40 of publication document of the present application. See also paragraphs 22-24.

Claim 28

Dependent claim 28 further defines claim 18 by reciting that the database server 26 is arranged in an SCP (Service Control Point). See paragraph 42 of publication document of the present application.

Claim 34

Independent claim 34 is directed to computer readable media containing program instructions for requesting the agreement of a user of a mobile terminal 13 (FIG. 3) of a mobile radio network to the transfer of their position data to a party, e.g., Locator Services Application (LCS) 11, requesting this position data. For example, see paragraphs 36-37 of publication document of the present application. The computer readable media comprises computer readable code for storing privacy data 18 regarding the mobile terminal in a database server at a central privacy location 26. The central privacy location constitutes a separate location from a Home Location Register (HLR) 16 for the mobile terminal. For example, see paragraphs 38-39 of publication document of the present application. The computer readable media further comprises computer readable code for defining the privacy data stored in the database server at the central

privacy location to assign to the mobile terminal at least one verification rule as to whether an agreement must be obtained on the mobile terminal side to forward the mobile terminal position to the requester. Computer readable code causes the switching center, in the event of the amival of a request from a requester for the position of the mobile terminal, to access the database server at the central privacy location to perform a check on the basis of the privacy data stored there.

Computer readable code is provided for sending the result of the check performed at the central privacy location to the switching center. Computer readable code is provided for sending, by the switching center, if the result at least indicates that an agreement must be obtained, a request for an agreement to the mobile terminal, and computer readable code is provided for transmitting, if the agreement is received by the switching center, the position of the mobile terminal to the requester. For example, see paragraphs 38-39 of publication document of the present application. See also paragraphs 22-24.

- 6. GROUNDS OF REJECTION TO BE REVIEWED UPON APPEAL 37 CFR 41.37(c) (1) (vi)
- A) Whether claims 18-27, 29-32 and 34 stand rejected under 35 U.S.C. 103(a) as being unpatentable over US pat. No. 6,311,069 (hereinafter Havinis) in view of US Publication No. 2001/0014604A1 (hereinafter Kingdon).
- B) Whether claim 28 stands rejected under 35 U.S.C. 103(a) as being unpatentable over Havinis in view of Kingdon and further in view of US pat. No. 6,961,417 (hereinafter Koch).

7. ARGUMENT-37 CFR 41.37(c) (1) (vii)

A. Regarding the rejection of claims 18-27, 29-32 and 34 under 35 U.S.C. 103(a) as being unpatentable over Havinis in view of Kingdon.

Appellant argues that the Havinis/Kingdon combination does not constitute an appropriate *prima facie* combination for renderings claims 18-27, 29-32 and 34 unpatentable because such combination, even if combined as suggested by the Examiner, fails to teach or suggest each of the claimed elements and/or operational relationships. With regard to the rejections applied against claims 18-27, 29-32 and 34, it is appellant's belief that not all of the rejected claims stand or fall together. More specifically, method claims 18-27, and 29-32 stand together. However, claim 34, directed to computer readable media, should be grouped separately from claims 18-27 and 29-32, for purposes of this appeal.

A.1 <u>Arguments Regarding Claim 18</u>

Applicant respectfully submits that the Havinis/Kingdon combination falls to describe or suggest the method set forth in claim 18. The method set forth in claim 18 allows requesting the agreement from a user of a mobile terminal of a mobile radio network regarding the transfer of the user position data to a party requesting this information.

The Examiner correctly acknowledges that Havinis fails to disclose or suggest that the central privacy entity constitutes a separate entity from a Home Location Register (HLR) for the mobile terminal. The Examiner then applies Kingdon to purportedly remedy the deficiencies of Havinis regarding the claimed invention. However, as discussed in greater detail below, the combination of Kingdon with Havinis fails to teach or suggest the claimed invention.

Kingdon is directed to provisioning assistance GPS data to a mobile station. See abstract of Kingdon. See also paragraph 14 of publication document of Kingdon. The presently claimed invention is directed to safeguarding privacy data from the mobile station when the mobile station is requested to report its

location. As best understood by applicant, there is no discussion in Kingdon of any kind regarding privacy issues that can arise when the reporting of location is from the mobile station, as set forth in the claimed invention. Although Kingdon may use various databases, (e.g., VLR 16, HLR 26 as shown in FIG. 1 of Kingdon), the utilization of such databases has nothing to do with the claimed operational relationships of storing privacy data at the central privacy location to assign to the mobile terminal at least one verification rule as to whether an agreement must be obtained on the mobile terminal side to forward the mobile terminal position to the requester. It is respectfully submitted that it is error for the Examiner to suggest that database VLR 16 of Kingdon somehow teaches the foregoing relationships merely because such database "contains various subscriber information". The prior art reference must describe and enable the claimed invention with sufficient clarity and detail to establish that the subject matter already existed in the prior art and that its existence was recognized by persons of ordinary skill in the field of the invention. See Elan Pharmans. Inc v. Mayo Found. For Med. Educ. & Research, 304 F3d 1221, 64 USPQ2d 1292, 1296 (Fed. Cir. 2002, opinion vacated on other grounds, 341 F3d 1051, 68 USPQ2d 1373 (Fed. Cir. 2003) (en banc); See also Crown Operations Int'l, Ltd. v. Solutia Inc., 289 F3d 1367, 1375, 62 USPQ2d 1917, 1921 (Fed. Cir. 2002).

In view of the foregoing remarks, it is respectfully submitted that neither Havinis nor Kingdon, singly or in combination, teach or suggest the structural and/or operational relationships set forth in claim 18. Accordingly, the Havinis/Kingdon combination fails to render claim 18 unpatentable under the §103 statutory requirements and this rejection should be withdrawn. Since claims 18-27, and 29-32 include the structural and/or operational relationships respectively recited in claim 18, it is also respectfully submitted that the Havinis/Kingdon combination also fails to render unpatentable claims 18-27 and 29-32. Accordingly, the rejection of claims depending from claim 18, should also be withdrawn.

A.2 Arguments Regarding Claim 34

Independent claim 34 is directed to computer readable media containing program instructions for requesting the agreement from a user of a mobile terminal of a mobile radio network to the transfer of their position data to a party requesting this position data.

The Examiner correctly acknowledges that Havinis fails to disclose or suggest that the central privacy entity constitutes a separate entity from a Home Location Register (HLR) for the mobile terminal. The Examiner then applies Kingdon to purportedly remedy the deficiencies of Havinis regarding the claimed invention. However, as discussed in greater detail below, the combination of Kingdon with Havinis fails to result in the claimed invention.

Kingdon is directed to provisioning assistance GPS data to a mobile station. See abstract of Kingdon. See also paragraph 14 of publication document of Kingdon. The claimed invention is directed to safeguarding privacy data from the mobile station when the mobile station is requested to report its location. There is no discussion in Kingdon regarding privacy Issues that can arise when the reporting of location is from the mobile station, as does the claimed invention. Although Kingdon may use various databases, (e.g., VLR 16, HLR 26 as shown in FIG. 1 of Kingdon), the utilization of such databases has nothing to do with the claimed structural and/or operational relationships set forth in computer readable code for defining the privacy data stored in the database server at the central privacy location to assign to the mobile terminal at least one verification rule as to whether an agreement must be obtained on the mobile terminal side to forward the mobile terminal position to the requester. It is respectfully submitted that it is error for the Examiner to suggest that database VLR 16 of Kingdon somehow teaches the foregoing relationships merely because such database "contains various subscriber information". (Citations omitted) Accordingly, the Havinis/Kingdon combination does not constitute an appropriate prima facie combination for rendering claim 34 unpatentable. Accordingly, the rejection of claim 34 should be withdrawn.

RECEIVED CENTRAL FAX CENTER NOV 2 2 2006

B. Regarding the rejection of claim 28 as being unpatentable under 35 U.S.C. 103(a) over Havinis in view of Kingdon and further in view of Koch.

Appellant argues that the Havinis/Kingdon/Koch combination does not constitute an appropriate *prima facie* combination for renderings claim 28 unpatentable because such a combination, even if combined as suggested by the Examiner, fails to teach or suggest each of the claimed elements and/or operational relationships.

More specifically, it is respectfully submitted that Koch fails to overcome the deficiencies of Havinis/Kingdon noted above in connection with claim 18, the parent claim of claim 28. Consequently, the Havinis/Kingdon/Koch combination fails to render unpatentable claim 28. Accordingly, the rejection of claim 28 should be withdrawn.

CLAIMS APPENDIX 37 CFR 41.37(c)(1)(viii)

18. A method for requesting the agreement of a user of a mobile terminal of a mobile radio network to the transfer of their position data to a party requesting this position data, the method comprising:

providing a central privacy location comprising a database server for storing privacy data regarding the mobile terminal, wherein said central privacy location constitutes a separate location from a Home Location Register for the mobile terminal;

defining the privacy data stored in the database server at the central privacy location to assign to the mobile terminal at least one verification rule as to whether an agreement must be obtained on the mobile terminal side to forward the mobile terminal position to the requester;

causing, by the switching center of the mobile radio network, in the case of the arrival of a request from a requester for the position of the mobile terminal in the switching center, the database server at the central privacy location to make a check on the basis of the privacy data stored there;

sending the result of the check performed at the central privacy location to the switching center;

sending, by the switching center, if the result at least indicates that an agreement must be obtained, a request for an agreement to the mobile terminal; and

transmitting, if the agreement is received by the switching center, the position of the mobile terminal to the requester.

- 19. The method according to Claim 18, wherein the request arrives at a position data acceptance location of the mobile radio network.
- 20. The method according to Claim 18, wherein the switching center is an MSC (Mobile Switching Center) or SGSN (Serving GPRS (General Pocket Radio Service) Support Node).
- 21. The method according to Claim 18, further comprising: requesting, by the switching center, the position of the mobile terminal from a BSS (Base Station System) or RAN (Regional Area Network) of the mobile radio network.
- 22. The method according to Claim 18, wherein

a verification rules specification can only comprise a prespecified set of different instructions, especially one of the following instructions: position data transfer without notification, position data transfer with notification to the mobile terminal, position data transfer only after agreement of the mobile station or if no response is received from the mobile station, only transfer position data with the agreement of the mobile station.

- 23. The method according to Claim 18, further comprising:
 storing, for a multiplicity of mobile subscriber identity modules and/or
 mobile stations, verification rules specifications and identity specifications for the
 mobile terminal or for a mobile subscriber identity module contained in it.
- 24. The method according to Claim 18, further comprising:
 regularly receiving, by a switching center, especially a Visitor Location
 Register of a switching center from the Home Location Register of a mobile
 network the telecommunications address of the database server or receiving it
 when a mobile terminal registers at the switching center or its Visitor Location
 Register VLR.

- 25. The method according to Claim 18, wherein position data is only transferred to a requester if this is allowed for the period of the recording of the position according to stored conditions for the user of the mobile station or its mobile subscriber identity module through attributes stored in the database.
- 26. The method according to Claim 18, further comprising: changing the conditions by the user via their mobile terminal or another terminal by mobile radio, WAP (Wireless Application Protocol), Internet, fixed network or in another way.
- 27. The method according to Claim 18, wherein the switching center is the mobile switching center currently being used by the mobile terminal.
- 28. The method according to Claim 18, wherein the database server is arranged in an SCP (Service Control Point).
- 29. The method according to Claim 18, wherein the database server is a database comprising the verification rules specifications and possibly additional attributes and comprising an additional unit which makes the check.
- 30. The method according to Claim 18, further comprising:
 storing the entries in the database server but, to make upwards
 compatibility with a Home Location Register, which does not support the
 improvement of the LCS (Locator Services) Privacy in accordance with the
 invention, transmitting entries to a mobile network Home Location Register on
 request or at regular intervals, so that the mobile network Home Location
 Register can transmit the entries to a switching center.
- 31. The method according to claim 30, further comprising performing a proportion of the checks in accordance with a classification in the switching center; and

transmitting the result as an additional input parameter to the database server.

- 32. The method according to claim 31, further comprising storing the entries in a Home Location Register; storing only additional attributes in the database server; and storing the address of the database server in the Home Location Register.
- 34. A computer readable media containing program instructions for requesting the agreement of a user of a mobile terminal of a mobile radio network to the transfer of their position data to a party requesting this position data, the computer readable media comprising:

computer readable code for storing privacy data regarding the mobile terminal in a database server at a central privacy location, wherein said central privacy location constitutes a separate location from a Home Location Register for the mobile terminal;

computer readable code for defining the privacy data stored in the database server at the central privacy location to assign to the mobile terminal at least one verification rule as to whether an agreement must be obtained on the mobile terminal side to forward the mobile terminal position to the requester;

computer readable code causing the switching center, in the event of the arrival of a request from a requester for the position of the mobile terminal, to access the database server at the central privacy location to perform a check on the basis of the privacy data stored there;

computer readable code for sending the result of the check performed at the central privacy location to the switching center;

computer readable code for sending, by the switching center, if the result at least indicates that an agreement must be obtained, a request for an agreement to the mobile terminal; and

computer readable code for transmitting, if the agreement is received by the switching center, the position of the mobile terminal to the requester.
